

Storm Cutters™ are helping to save lives.

Three years of research and development have gone into the unique design of Storm Cutters™ wire cutting system to create a safer platform for both plane and pilot.

"There isn't a good reason not to purchase a set of Storm Cutters™. The design and quality are top notch and you're getting a rugged, well-built product."
—Britton Scott, Precision Aerial, LLC
Oberlin, KS

Featured components of Storm Cutters™

Spacer blocks stabilize and strengthen the blade in the event of a wire strike.

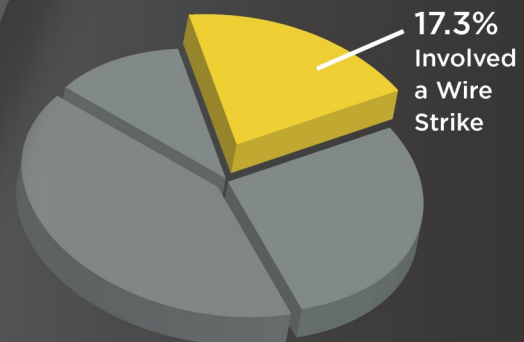

Grip tape placed on the top two clamps help with footing when stepping on landing gear.

Blade is hard "cased" to 61 Rockwell Hardness, equal to that of a file or chisel.

Adel clamps on the back of the gear secure the brake line and do away with the standard black zip ties currently used to secure the brake line.

From 1995-2013 there were 1,791 FAA Part 137 Accidents (Agricultural Aviation) in the US. Of those total accidents 218 were collisions with wires which made up 12.2% of the accidents. Within those 1,791 accidents 173 were fatal, of which 30 were the result of wire strikes. 17.3% of all fatalities in Agricultural Aviation were linked to a wire strike.* Storm Cutters™ help mitigate risk in the event of a wire strike.

We are currently taking orders for every model of Air Tractor from the 300 through 800 series.

Agricultural Aviation Fatal Accidents
